

Weatherproof LED Tree INSTALLATION

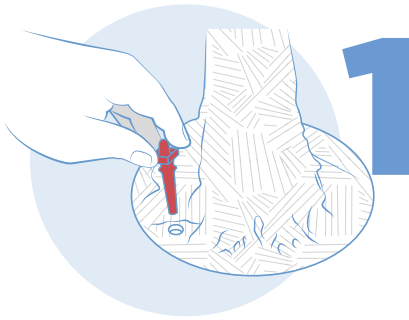

PACKING BOX

INSTALLATION TOOLS

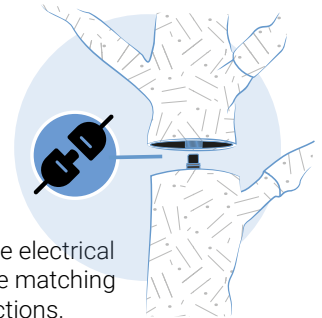

START WITH YOUR TRUNK

1

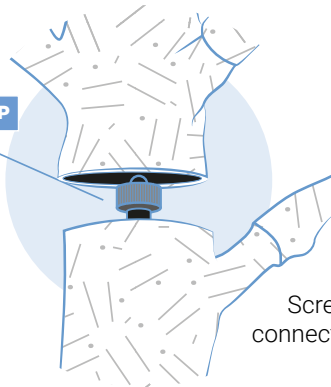

Find a flat area to place tree trunk in desired position. If using permanent installation or for outdoor use, bolt down to secure your tree.

2

Connect the male/female electrical connectors, following the matching numbered trunk sections.

PROTECTIVE CAP

3

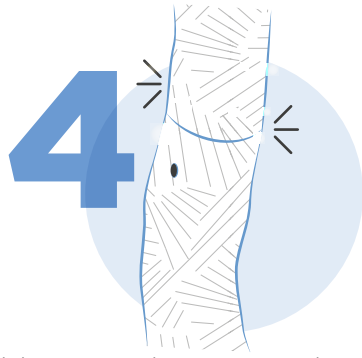

Screw the protective cap over the connections to ensure a watertight seal.

LED TREE BRANCH CONNECTION WARNING!

Please ensure the connection points are carefully connected. If the notch is not lined up correctly on all connection points the control box will be burnt and need to be replaced at buyers expense.

Slide connected wires into trunk parts and slot pieces into place.

Using Allen key secure the trunk with grub screw.

FINISH WITH CONNECTING BRANCHES

Plug the male/female electrical connectors and screw the protective cap over the connections to ensure a watertight seal.

Using Allen key secure branches with grub screws.

Bend and arrange branches to desired placement.

Plug in and **ENJOY!**

WARNING

1. Only to be powered by standard 120V outlet
2. Branches are not interchangeable between different models

3. We do not recommend adding dimmer switches or other after market changes to this product

4. When attaching branches plugs must be lined up correctly and fully screwed into place

If trees are not installed properly this can lead to power shorting issues, bulb burn out and fire hazards.
